

EzKleen™ Roll Polisher

Doctor blades are used to remove contaminants and other matter from roll surfaces. Over time, the build-up on the roll surface requires additional cleaning to ensure more uniform roll surface conditions.

The EzKleen roll polisher safely and effectively removes build-up from roll surfaces and is designed for machines producing grades for porous roll surfaces that require specialized surface cleaning and conditioning. The EzKleen roll polisher removes build-up on roll surfaces without costly surface regrinds or special release coatings. Using the EzKleen roll polisher during regularly scheduled downtime has been shown to improve the condition of the roll surface. The EzKleen roll polisher conveniently fits into most conventional roll cleaners and incorporates application specific cleaning pads for cleaning and polishing the surface of any roll on the production line.

N8133 Blue
180-220 grit equivalent

N8132 Green/Amber
200-300 grit equivalent

N8130 Black
80-150 grit equivalent

Overview

Features

- Replaceable cleaning pads
- Application-specific pads available
- Fits into existing blade holder system
- Self-adjusting pivot blade

Benefits

- More uniform roll surface conditions
- Increase heat transfer
- Maintains roll surface finish (Ra)
- Reduce the need for off machine roll conditioning
- Safe operation requiring limited or no manpower
- Easy installation and removal
