

VeriLite™ Roll Cleaner Assembly for Metals Industry

Challenge A U.S. metals manufacturer was experiencing a lack of effective roll cleaning throughout its sheet processing and finishing lines. The company was losing thousands of dollars a year in scrap due to sheet imperfections which lead to the coils being scraped. Safety concerns were also increasing as mill personnel were using a homemade scraper to clean rolls during downtime.

Solution A VeriLite roll cleaner assembly was installed on the processing and finishing lines.

Results The installation was successful and the mill reported a quick ROI. The mill manager commented, “You actually have systems that work unlike the competition. You are the industrial standard for blades. Wish I would have known that years ago.”

Highlights

VeriLite roll cleaners:

- Reduced scrap
- Improved safety
- Lead to less downtime
